

Potential policy is:

- **School Walk Routes - Ladder crosswalks along all school walk route “spines” leading to the school. Crossing guard locations will have two of the four legs striped with ladders to help funnel the students to cross at the desired locations.**
- **Neighborhood border with arterial - Standard crosswalks along all arterials at neighborhood borders**
- **Signalized intersections – Standard crosswalks at all legs (unless a school crossing or engineering investigation suggests a different type of crosswalk).**
- **Other locations as per engineering investigation (e.g. adjacent to parks, problem intersections, traffic calmed streets, etc.)**
